

Differentiators

We are dedicated to developing the best strategies in the face of dwindling financial resources. We work to fully understand our client's needs and develop meaningful solutions to solve complex management challenges correctly the first time.

We expend significant resources to retain highly qualified individuals with great work ethic. Our employees make that extra effort to ensure our clients are happy with their work.

Our key personnel have years of experience with DOD contracts. We are intimately familiar with the Navy way of doing business. However, we can easily step outside of the box when a problem calls for new and innovative solutions.

Company Snapshot

Assisted Management Solutions (AMS) provides the highest quality technical expertise in the areas of environmental consulting, management system implementation, database/web design, and facility information management. We are innovative and professional problem solvers that focus on performance, not profit.

Core Competencies

- Program management plan development, permit support, and compliance reporting for all environmental programs (e.g., EPCRA, Hazardous Waste, Storage Tanks, Drinking Water, Wastewater, Stormwater, Air Quality)
- Sustainable implementation of ISO 14001 conforming management systems for environmental, safety, and facilities (e.g., EMS)
- Customized software, SQL Server, Oracle, MS Access, SharePoint
- *EMSWeb* subject matter experts (SME)
- Civil engineering for site development
- SPCC services and AST/UST testing and inspections
- Field monitoring, sampling, and analysis
- Environmental remediation design
- Geotechnical investigation and design
- GIS mapping services and CADD
- Facility Information Management
- Research, technical training, strategizing, problem solving
- Radon measurement services

Point of Contact

Recent Past Experience

NSA Bethesda Radon Survey. AMS is conducting a yearlong survey to measure radon levels at NSA Bethesda. AMS will develop their radon management plan and analyze radon results from over 600 locations.

Utilities Support, NAS Patuxent River Complex. AMS is developing a Site Specific Spill & Contingency Plan, a Wellhead Protection Plan, and a Water Conservation Plan for NAS Patuxent River Complex. AMS is updating their integrated Drinking Water Sampling Plan and Cross-Connection & Backflow Prevention Plan.

Hazardous Waste (HW) Management System Development, NAVFAC. AMS is the Lead Software Architect and SME for NAVFAC's HW Management System. This enterprise web system will be utilized to create, track, and manage HW records, waste profiles, 1348s/Dos/BOLs/ manifests, billing, internal reports, and compliance reporting at all NAVFAC facilities.

Environmental Compliance Support, NAS Patuxent River. AMS is performing environmental liability surveys, assisting with EMS implementation, and developing a supervisor's guide for environmental compliance. We have provided management support for Storage Tank, Stormwater, Air Quality, HW, Wastewater, and Spill programs.

EPCRA Services at NSA Washington. The project includes the completion of hazardous material inventories across multiple installations, preparation of EPCRA 312 Tier II Reports, and EPCRA 313 Toxic Release Inventory reporting.

Landfill Monitoring & Maintenance, Marine Corps Base Quantico. The project includes groundwater sampling, methane gas sampling, leachate system testing, grounds maintenance, and inspections of three landfills at Quantico.

BayFAST Website for NDW Region. AMS compiled stormwater BMP data from installations for entry into BayFAST to determine load reductions and support the Watershed Model while providing BayFAST training to managers.

Tank Management Plan (TMP) and EMSWeb Support at NSA Bethesda. We developed a TMP for all ASTs and USTs at NSAB and provided *EMSWeb* data entry and training for managers.

Water Distribution Survey at Washington Navy Yard (WNY). We surveyed potable water utility lines/features for a GIS mapping update of the WNY water distribution system and developed valve exercises and unidirectional flushing plans.

Environmental Compliance Support, Justice Department. We provided EMS assistance and environmental management support for Storage Tank, Stormwater, EPCRA, and Air Quality programs at a confidential location with active construction sites and complex issues.

Facility Information Resource Center for WNY and National Naval Medical Center. We provided the tools for indexing thousands of facility drawings and organized all digital files on a local server. We developed a customized MS Access database so Project Managers could efficiently search for digital files from their desktop.

EMSWeb Development for Navy. AMS was the lead SME during the design phase of a Navy wide web solution to assist managers with EMS implementation and compliance requirements including tracking audit findings from both EMS and environmental compliance audits.
